GENERAL TABLES	
Table I.—Total births and deaths (exclusive of stillbirths) with rate per 1,000 population for the years 1914-1938, inclusive .....	14
Table II.—Births (exclusive of stillbirths) in each county, by color, with rate per 1,000 population, per cent attended by physicians and number illegitimate, 1938 .....	15
Table II-A.—Births (exclusive of stillbirths) in each city of 10,000 population or over in 1930, by color, with rate per 1,000 population; per cent attended by physicians and number illegitimate, 1938 .....	19
Table III.—Deaths (exclusive of stillbirths) for the State as a whole from each cause, by sex, color and age 1938 (includes all deaths occurring in North Carolina) .....	20
Table IV.—Deaths (exclusive of stillbirths) in each county, by color, with rate per 1,000 population, 1938 .....	62
Table V.—Deaths (exclusive of stillbirths) in each county, by cause of death (abridged international list) and by color of decedent, 1938 .....	66
Table VI.—Deaths (exclusive of stillbirths) in cities or towns, by cause of death (abridged international list) and by color of decedent, 1938 .....	116
Table VII.—Death rates per 100,000 population (by place of death, also by place of usual residence) in each county, from nine important causes, with estimated population, 1938 .....	126
Table VIII.—Deaths (exclusive of stillbirths) by cause by certain subdivisions of the first year of life, 1938 .....	130
Table IX.—Deaths under 1 year of age (exclusive of stillbirths), and maternal deaths in each county with rates per 1,000 live births, 1938 .....	132
Table X.—Cases and deaths from special diseases by month of occurrence, 1938 .....	134
Table XI.—Cases from 30 of the reportable diseases by counties, 1938 .....	138
Table XII.—Death rates per 100,000 population from ten important causes, for the State as a whole, with estimated population for each year, 1914-1938 .....	142

## LETTER OF TRANSMITTAL

*To His Excellency, CLYDE R. HOEY,  
Governor of North Carolina,  
Raleigh.*

My dear Governor Hoey:

I have the honor of transmitting the report for the Bureau of Vital Statistics covering the calendar year 1938.

With assurance of my very best respect, I am

Sincerely,

CARL V. REYNOLDS, M. D.,  
*Secretary and State Health Officer.*

## ANNUAL REPORT OF THE BUREAU OF VITAL STATISTICS

This annual report of the Bureau of Vital Statistics presents tabulations of births and deaths for the calendar year 1938. The Bureau of Vital Statistics was established July 1, 1913 by legislative enactment and began the registration of births and deaths in October of the same year, but it was not until 1916 for deaths and 1917 for births that registration was complete enough for admission to the United States Registration Area.

The first annual report contained tabulations for 1914, and a report has been published annually ever since with the exception of 1918 and 1919. Beginning with the 1931 report county and city tabulations have been made according to the abridged International List of Causes of Death. State tabulations have continued to be made according to the detailed International List. The present report follows the plan begun in 1932 of tabulating births and deaths both by place of occurrence and by place of residence. Births have been allocated to the legal residence of the mother and deaths to the place of legal residence before death of the deceased. In order to permit comparison with years before tabulations by place of residence were begun, deaths and births have been recorded by place of occurrence and by place of residence.

Although tabulation by residence corrects one, probably the greatest, source of error in comparing the rates of different localities there are other factors that must be taken into consideration. For example, the rates given in this report are crude rates in the calculation of which no allowance is made for the differences in sex, age and color distribution of the population. Furthermore, the degree of completeness of reporting may vary in different localities and this should be taken into consideration when comparing the rates of two areas.

### POPULATION

Population estimates for the State, and more especially for its political sub-divisions, may vary widely from the true population when made this far removed from the 1930 census enumeration. State rates are based on an estimated population of 3,527,000. To arrive at an estimated population for each county the increase computed for the State as a whole was distributed among the counties in proportion to the share which each county had in the increase between 1920 and 1930. No estimate was made for

areas where the population decreased between 1920 and 1930, the figures shown being those of the 1930 Federal Census.

### NATALITY

*Live Births:* The birth rate of 22.7 per 1,000 population was the same as that for 1937. In actual numbers there were 79,903 births compared to 79,244 in 1937. Of the 79,903 live births, 54,469 were white; 24,647 negro; and 787 Indian, representing rates of 21.9 per 1,000 population for white and 24.0 for negro. The birth rate ranged between 30 and 35 per 1,000 population from 1914 to 1924. From the latter date the rate dropped rapidly to 24.7 in 1929 and since that time there has been only a slight downward tendency.

*Stillbirths:* In conformity with statistical practice, the stillbirths were not included in the totals of either births or deaths, but tabulated separately. There were 3,086 stillbirths, or 74 fewer in 659 more births than in 1937. This represents a decline in the stillbirth rate from 39.9 to 38.6 per 1,000 live births.

### MORTALITY

In the compilation of mortality statistics the cause of death as stated by the physician is used as the basis of classification by causes. Since the accuracy of statistics can be no greater than that of the material upon which they are based, it is desirable that physicians give as accurate and complete a diagnosis of the cause of death as possible. A specific cause, rather than a general condition or symptom, is essential if the greatest accuracy is to be expected. Failure to conform with this rule necessitates that hundreds of certificates be queried yearly as to cause of death in order to classify them correctly.

The health conditions in North Carolina for 1938 as indicated by the death rate were, in general, more favorable than for the preceding year. There were fewer deaths recorded from all causes combined and consequently a lower death rate than for 1937. The 33,564 deaths, exclusive of stillbirths, represent an annual death rate of 9.5 per 1,000 population. The mortality rate for 1937 was 9.7 per 1,000 population. The mortality rate for 1937 was 9.7; for 1936, 10.3; and for 1935, 9.8. Considered in terms of total deaths, the number reported for 1938 was 407 fewer than for 1937.

When the deaths are analyzed by cause it is discovered that the group of degenerative diseases caused more deaths than in

1937. This group—heart diseases, chronic nephritis, apoplexy, cancer, diseases of the arteries, and diabetes mellitus,—six in all, accounted for 14,153 in 1937 and 14,675 in 1938. These degenerative diseases accounted for approximately 44 per cent of all deaths in 1938 and 42 per cent in 1937.

TABLE 1. DEATHS FROM DEGENERATIVE DISEASES

<i>Cause of Death</i>	<i>Number</i>	
	1937	1938
Heart Diseases .....	5,758	5,819
Chronic Nephritis .....	2,755	3,057
Cerebral Hemorrhage .....	2,940	3,051
Cancer .....	1,912	1,915
Diseases of the Arteries .....	402	454
Diabetes .....	386	379
Total .....	14,153	14,675

The principal causes of death in 1938 in order of their rank were diseases of the heart, nephritis, apoplexy, the pneumonias, congenital malformations and diseases of early infancy, violent and accidental deaths, exclusive of homicides and suicides, cancer and tuberculosis. This order is entirely different from that shown twenty-four years ago, the first year of registration, when tuberculosis ranked first with a rate of 139 deaths for every 100,000 population. Tuberculosis ranked eighth in 1938 with a rate of 52.5.

Heart diseases rank first in 1938 in the list of causes of death. In 1914 there were 1,780 deaths charged to this condition and in 1938 diseases of the heart, including angina pectoris, accounted for 5,819 deaths. This represents a rate twice that of 1914. Nephritis, second in importance, was seventh twenty years ago. The death rate from pneumonias has changed little, but due to the increase in deaths from other conditions, pneumonia has dropped from second to fourth place. Diarrhea and enteritis, a major cause of death in 1914, is ninth in 1938. The rate has fallen from 98.8 per 100,000 population in 1914 to 37.1 in 1938. Modern sanitary measures have played a large part in reducing the death rate from diarrhea among infants.

*Typhoid Fever:* The death rate from typhoid fever, after a slight increase in 1937, again showed a decrease, continuing the downward trend shown annually since 1932 with the exception of 1937. The 71 deaths were four less than for 1937. The improve-

ment in the condition since the beginning of registration can be appreciated by comparing the rate of 35.8 in 1914, or a total of 839 deaths, to the present low rate of 2.2 or 75 deaths.

*Smallpox:* There was no death from smallpox in 1938. With the exception of one death in 1937 there has not been a death reported from this disease since 1931. Thirty-five cases were reported to the Division of Epidemiology in 1938 and eleven in 1937.

*Diphtheria:* The record for 1938 shows approximately the same number of deaths and death rate from diphtheria as for 1937. There were 173 deaths with a rate of 4.9 per 100,000 population compared to 168 deaths with a rate of 4.8 for 1937. There was a seventy per cent reduction in the mortality rate from this disease from 1915 to 1932, but no significant decrease in the rate since. In round numbers, five-sixths of the deaths from diphtheria occur in children under five years of age. This indicates that vaccination to be most profitable must be done long before the child becomes of school age.

*Influenza and Pneumonia:* There were 2,717 deaths from pneumonia and 505 deaths from influenza, making a total of 3,222 recorded for 1938. The deaths from these two conditions give a rate of 91.4 per 100,000 population for 1938 as against a rate of 108.4 for 1937. There were 357 fewer deaths from influenza during 1938 than for the previous year and 206 fewer from pneumonias.

*Tuberculosis:* The death rate from all forms of tuberculosis was 52.2 in 1938 and 54.8 in 1937. This represents a decrease in actual numbers of 59. Tuberculosis ranked first among all causes of death in 1914, but has fallen to eighth place in 1937. In the past twenty years the mortality rate has declined by approximately 65 per cent.

Of the 1,853 deaths from all forms of tuberculosis, 51.5 per cent were males and 48.5 per cent females; 38 per cent were white and 62 per cent colored. The colored rate of 111.2 for tuberculosis is almost four times the white rate of 28.3.

*Cancer:* Cancer accounted for 1,915 deaths in 1938, giving a rate of 54.3 against a rate of 54.8 for 1937 and 51.6 for 1936. Taken over a number of years the general trend of cancer mortality has been upward, but for four years prior to 1937 we had at least held our own. In 1937 there were 93 more deaths than in 1936, and three more this year than in 1937.

*Pellagra:* The 257 deaths from pellagra, representing a mortality rate of 7.3 per 100,000 population, was a decrease over the rate of 13.0 for 1937. There has been a downward trend in mortality from this disease since 1930 with the exception of 1934 and 1937. The peak year for pellagra deaths was 1930 when 1,015 were charged to this disease.

*Suicides and Homicides:* There were 332 suicides in 1938 and 305 in 1937. The 27 more deaths increased the rate from 8.7 per 100,000 population in 1937 to 9.4 in 1938. There were 52 more homicidal deaths in 1938 than in 1937, the totals being 356 and 408 respectively.

*Accidental Causes:* Violent and accidental deaths, exclusive of suicides and homicides, accounted for 2,217 deaths, 267 fewer than in 1937. Violent and accidental deaths rank sixth among the principal causes of death. Automobile accidents accounted for the greatest number of the accidental deaths. There were 906 deaths from all types of automobile accidents in 1938 and 1,056 in 1937. Railroad accidents, exclusive of collisions with automobiles, caused 89 deaths in 1938 and 99 in 1937.

*Maternal Mortality:* The diseases of pregnancy, childbirth and the puerperal state continued to exact a large number of lives. Deaths from maternal causes and the maternal mortality rates per 1,000 live births for the past ten years are shown in Table 2. There were 450 maternal deaths in 1938 to 445 in 1937, or 5 fewer deaths and 659 more births. This gives a maternal mortality rate of 5.6 per 1,000 live births, the same as for last year. There were 240 white, 206 negro and 4 Indian puerperal deaths, accounting for a death rate of 4.5 per 1,000 live births for the white and 8.4 for the colored.

TABLE 2.—TOTAL MATERNAL DEATHS AND RATES,  
1929-1938

<i>Year</i>	<i>No. of Deaths</i>	<i>Rate</i>
1929 -----	684	8.8
1930 -----	645	8.4
1931 -----	640	8.5
1932 -----	555	7.1
1933 -----	535	7.1
1934 -----	605	7.6
1935 -----	554	7.0
1936 -----	532	7.0
1937 -----	445	5.6
1938 -----	450	5.6

Albuminuria and eclampsia, as in previous years, accounted for more of the puerperal deaths than any other single cause. The second and third greatest offenders were puerperal septicemia and puerperal hemorrhage, respectively. Albuminuria and eclampsia with other toxemias of pregnancy account for 155 maternal deaths, which is 34 per cent of all maternal deaths.

*Infant Mortality:* The total number of deaths under one year of age was 5,461 or 299 more than occurred in 1937. The rate for 1938 was 68.3 per 1,000 live births and 65.1 in 1937. Of the total deaths 3,244 were white and 2,217 colored. This gave a rate of 59.6 for the white and 87.2 for the colored. The number of deaths of infants under one year of age and the infant mortality rates per 1,000 live births for the past ten years are shown in Table 3.

TABLE 3.—TOTAL INFANT DEATHS AND RATES,  
1929-1938

<i>Year</i>	<i>No. of Deaths</i>	<i>Rate</i>
1929 .....	6,112	79.2
1930 .....	6,021	78.4
1931 .....	5,459	73.0
1932 .....	5,173	66.4
1933 .....	4,974	66.0
1934 .....	6,196	77.9
1935 .....	5,407	67.9
1936 .....	5,221	68.4
1937 .....	5,164	65.1
1938 .....	5,461	68.3

Five principal causes of infant mortality accounted for 70 per cent of all infant deaths. These causes with the number of infant deaths charged to each were as follows:

Premature birth .....	1,502
Diarrhea and enteritis .....	847
Pneumonias .....	675
Sudden death (cause not specified) .....	470
Congenital malformations .....	334
 Total .....	 3,828

Of the 5,461 deaths of infants under one year of age 1,238 or 24 per cent died during the first day of life and 2,075 or 38 per cent within the first week.

## REGISTRATION

Every birth and death occurring in North Carolina should be recorded with the Bureau of Vital Statistics. To the individual the registration of a birth occurring in North Carolina makes it possible always to obtain an official record of the facts surrounding his advent into life. The purposes for which certified copies of birth certificates are requested indicate that their value is becoming more generally realized from year to year. Likewise, the demand for death certificates show that this vital record is essential in upholding the right of citizens in the establishment of necessary facts in the closing event of life.

Vital Statistics are of inestimable value to the public health workers, but without complete registration full reliance cannot be placed on the data. For health organizations accurate certificates are essential if our true problems are to be known, if our programs are to be intelligently planned and we are to ascertain their effectiveness and if errors in our work are to be detected. It is, therefore, important that every effort be made to promote the completeness of our birth and death records.

TABLE 1—TOTAL BIRTHS AND DEATHS (EXCLUSIVE OF STILLBIRTHS) WITH RATE PER 1,000 POPULATION FOR THE YEARS 1914-1938 INCLUSIVE

YEAR	Births		Deaths	
	Number	Rate	Number	Rate
1914.....	*71,931	31.2	29,044	12.4

\*No deaths reported from smallpox.

TABLE VIII—DEATHS (EXCLUSIVE OF STILLBIRTHS) BY CAUSE AND

CAUSE OF DEATH	Total	Under 1 Day	1 Day
All causes.....	5,461	1,238	297
1. Typhoid and paratyphoid fever.....			
6. Smallpox.....			
7. Measles.....	62	1	
8. Scarlet fever.....			
9. Whooping-cough.....	171		
10. Diphtheria and croup.....	18		
11. Influenza.....	76		
13. Dysentery.....	47		
15. Erysipelas.....	5		
16. Acute poliomyelitis and acute polioencephalitis.....	2		
18. Epidemic cerebrospinal meningitis.....	5		
22. Tetanus.....	11		
23. Tuberculosis of the respiratory system.....	6		
24-32. Tuberculosis of the meninges and central nervous system.....	10		
34. Syphilis.....	104	17	1
36. Purulent infection, septicemia.....	3		
63. Rickets.....	12	1	1
79. Meningitis.....	24		
86. Infantile convulsions.....	18	1	1
89. Diseases of the mastoid process.....	23		
90-95. Pericarditis, endocarditis and myocarditis and other diseases of the heart.....	6		
106. Bronchitis.....	12		
107. Bronchopneumonia.....	511	2	1
108. Lobar pneumonia.....	164	1	
110. Pleurisy.....	1		
117. Ulcer of the stomach and duodenum.....			
119. Diarrhea and enteritis.....	847	1	1
121. Appendicitis.....			
122. Hernia, intestinal obstruction.....	21		
130. Acute nephritis.....	4		
151. Furuncle.....			
152. Phlegmon, acute abscess.....	6		
153. Other diseases of the skin and cellular tissue.....	10		
157. Congenital malformation.....	334	76	23
158. Congenital debility.....	213	31	11
159. Premature birth.....	1,502	856	162
160. Injury at birth.....	251	98	35
161. Other diseases peculiar to early infancy.....	124	37	16
181. Accidental burns.....	8		
182. Accidental mechanical suffocation.....	59	4	3
186. Accidental fall.....	2		
172. Infanticide.....	1		1
199-200. Sudden death; cause not specified or ill-defined.....	470	99	32
Total—All other causes.....	318	13	9
